Skills

- **Programming Languages** : Javascript, Java, CSS
- **Libraries and Frameworks** : React, Node.js, Spring Boot, Express.js, Redux, JUnit
- **Tools** : Microservices, MySQL, MongoDB, REST API, PostgreSQL, Kafka, Docker, Kubernetes, CI/CD, Visual Studio, SQL, Generative AI, Prompt Engineering

Projects

[AI-Powered Personal Productivity Agent](#)

- Engineered a full-stack AI productivity agent supporting 5+ task categories with recurring rule handling and multi-stage reminder logic, automating deadline tracking and reducing manual planning effort by 60%.
- Integrated self-hosted Mistral 7B via Ollama REST API for intent classification and structured JSON extraction (temperature=0), enabling conversational task creation with less than 1.5s average inference latency and schema-validated outputs.
- Designed a Redis-backed scheduling engine with adaptive reminder escalation (5-day, 1-day, same-day alerts) and calendar synchronization, ensuring reliable task execution across concurrent workflows with persistent job recovery support.

[AI Resume Copilot AI-Powered Resume Analyzer and Optimizer](#)

- Built an AI-powered resume analysis platform that evaluates resumes for ATS compatibility, keyword optimization, and skill relevance, generating instant feedback reports in less than 3 seconds to improve job application success.
- Implemented resume parsing and job-description matching algorithms to extract and analyze 50+ technical and soft skills, improving resume-to-job alignment scoring accuracy by 85% during testing.
- Designed a responsive full-stack dashboard enabling users to upload resumes and receive AI-generated improvement suggestions, reducing manual resume review time by 70%.
- Deployed the application on Vercel with scalable serverless infrastructure, supporting 100+ concurrent resume analyses and ensuring 99% uptime during testing.

[Core-X \(AI powered Payments and Expense Tracking App\)](#)

- Built a full-stack Amex-aligned fintech platform using React, Vite, Node.js, and Express, integrating a unified interface for spend management, expenses, and personalized offers.
- Developed an agentic spend workflow that converts user intent into actionable decisions and implemented REST APIs for intents, expenses, receipts, offers, and application bootstrapping.
- Implemented receipt upload and automated expense processing using Express/Multer, with a PostgreSQL-aligned data model and API architecture designed for scalable persistence.
- Integrated an LLM-powered concierge through OpenRouter with deterministic fallback responses, and deployed the production application on Vercel.

Education

Woolf University(ECTS), Malta, Europe, MSc

2027

MSc in Computer Science

KIIT University(DU), Bhubaneswar, India, B.Tech

2024

B.Tech in Electronics and Telecommunication Engineering

Achievements

- Delivered production-ready systems from design → development → deployment (Vercel, Render).
- Achieved multiple Leet-coding challenge badges for consistently solving DSA problems.
- Achieved 5 star rating in Java in Hackerrank.
